The Leading Role of Brazilian Forests in the Global Climate Agenda

Rio Nature &
Climate Week

To position nature, restoration and the bioeconomy as strategic components of a large-scale economic and financial agenda for Brazil, capable of combining climate integrity, income generation, financial innovation, biodiversity conservation and the enhancement of local areas.

The Leading Role of Brazilian Forests in the Global Climate Agenda

United Nations
Climate Change

Bonn Climate Change
Conference (SB 64)

Brazil, a global forest powerhouse, holds ~500M hectares of forests. This panel explores how these forest continuum lead climate solutions—from carbon storage and “flying rivers” to biodiversity—while advancing the forest areas through robust policies and innovation.

Forest Restoration at Scale: Brazil's Roadmap and the Global Opportunity

London Climate
Action Week

This panel will discuss the opportunities that forest restoration in Brazil presents for the climate and nature agenda. By exploring key advancements in the sector, as well as the critical bottlenecks that must be addressed, the discussion will focus on the key levers for scaling up restoration initiatives, extending the Brazilian experience to other forest-rich nations and tropical biomes globally.

Mobilising Action for Nature

London Climate
Action Week

This roundtable will bring together senior leaders from finance, policy, and business to discuss how to address nature loss by mobilising capital and strengthening the partnerships and enabling conditions needed to drive nature-positive outcomes at scale.

Through the partnership with Arapyaú, the session will place particular emphasis on ecosystem restoration as a key opportunity to advance climate and biodiversity goals. The discussion will also highlight findings from the publication *The Leading Role of Brazilian Forests in the Global Climate Agenda*.

The leading role of Brazilian forests in the global climate agenda

World Climate
Investment Summit

 World
Climate
Foundation

instituto
arapyau 

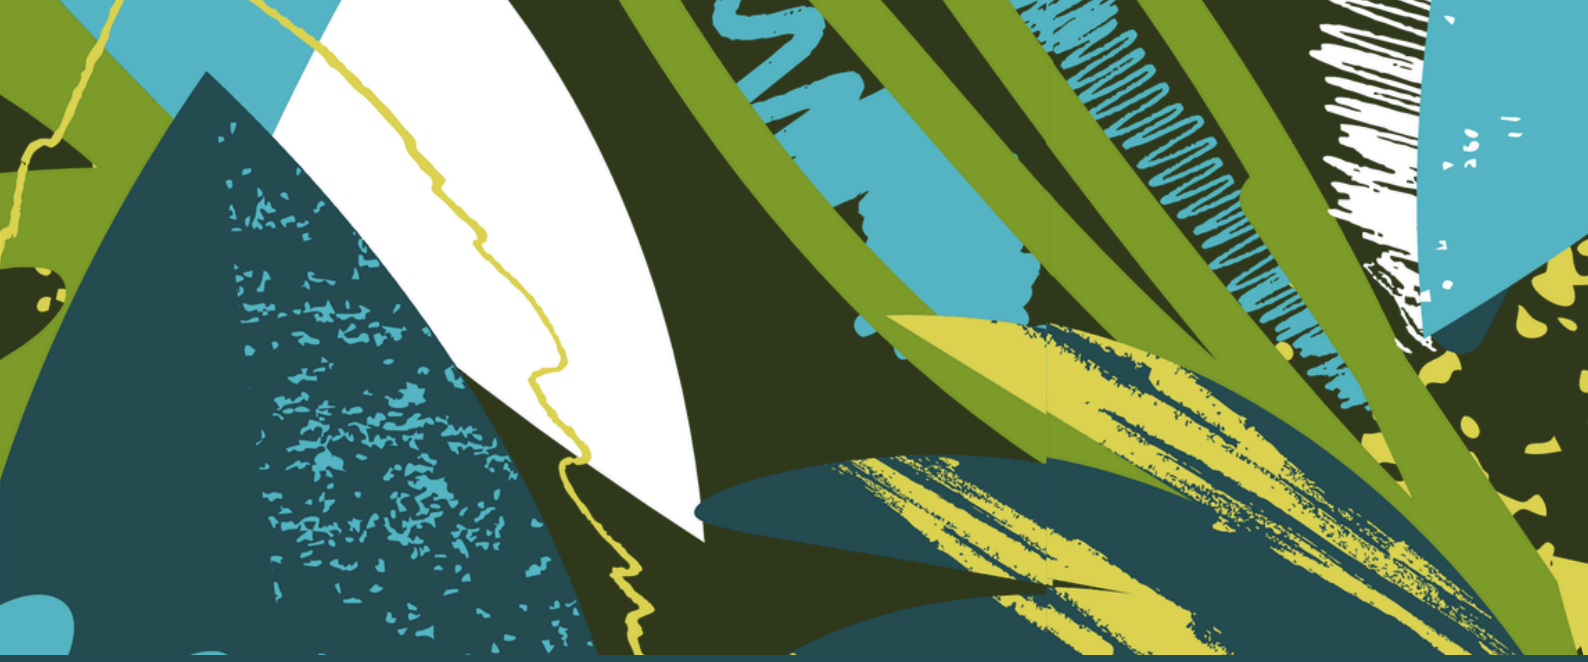

The workshop addresses the role of Brazilian forests in the climate agenda and Brazil's proposal using the concept of a forest continuum, integrating different types of forests (conservation, restoration, and intensive planting) for the generation of various types of products and services with interconnected impacts, increasing forest cover in territories and its impact on carbon.

Guests only
